WORK EXPERIENCE

Capgemini

Software Engineer for Telco

- ❖ Fullstack developer for a CRM project in Deutsche Telekom – leading telecommunication company in EU
 - onboarding Juniors to the project during their first month with the help of VSCode extension – CodeTour; providing them with task implementation steps in a verbal form
 - designing and building our front end web site & customer portal
 - increasing the productivity of the team by 10-15% by delivering the Jira tasks on time and supporting the rest of the team
 - writing clean code for the website's functionality and appearance. I used clean code principles and techniques such as naming conventions, modularization, refactoring, and commenting to make the code easier to read and understand
 - making a comprehensive documentation for the website, explaining its features, architecture, and dependencies – I have achieved this by using our local system that keeps documentation as well as utilising VSCode extension: Draw.io
 - using various technologies such as Angular, PostgreSQL, Angular Material UI, and Java to create a responsive and user-friendly website
 - testing with JUnit4 and participating in peer code reviews to apply to best code practices and standards in enterprise development
 - collaborating with other fellow developers in daily stand-up meetings, where we reported on our completed tasks, provided support and feedback to each other, and suggested ways to optimise the project's performance
 - communicating in English, Polish with the project manager and the client to ensure that the project milestones are adequate and the website will meet their expectations

OTHER PROJECTS

[WildRydes](#)

- A comprehensive serverless website hosted in AWS
Tech Stack: Vue, AWS, API Gateway, DynamoDB

[Hag Partner](#)

- Developed and maintained a website for a business offering services to Uber Eats drivers in Poznan, Poland
Tech Stack: WordPress, Figma, CSS, HTML
